

Paper Submission

Authors are encouraged to submit high-quality, original work that has neither appeared in, nor is under consideration by, other journals.

Springer offers authors, editors and reviewers of **World Wide Web Journal** a web-enabled online manuscript submission and review system. Our online system offers authors the ability to track the review process of their manuscript.

Manuscripts should be submitted to: <http://WWWJ.edmgr.com> under the article type "Querying the Data Web." This online system offers easy and straightforward log-in and submission procedures, and supports a wide range of submission file formats.

Important Dates

- Paper submission deadline: 22 April 2010
- First round notification: 1 June 2010
- Revised version due: 15 July 2010
- Camera-ready papers: 30 September 2010
- Publication: Early 2011

Special Issue Call for Papers: Querying the Data Web

Novel techniques for querying structured data on the web

Guest Editors:

Paolo Ceravolo, Università degli Studi di Milano, Italy, E-mail: paolo.ceravolo@unimi.it, bio available from <http://ra.crema.unimi.it/ceravolo>

Chengfei Liu, Swinburne University, Australia, E-mail: CLiu@groupwise.swin.edu.au bio available from <http://www.ict.swin.edu.au/personal/cliu/>

Mustafa Jarrar, University of Cyprus, Cyprus, Email: mjarrar@cs.ucy.ac.cy, bio available from www.jarrar.info

Kai-Uwe Sattler, Ilmenau University of Technology, Germany, Email: kus@tu-ilmenau.de, bio available from <http://www.tu-ilmenau.de/dbis>

The rapid growth of structured data on the Web has created a high demand for making this content more reusable and consumable. Companies are competing not only on gathering structured content and making it public, but also on encouraging people to reuse and profit from this content. Many companies have made their content publicly accessible not only through APIs but also started to widely adopt web metadata standards such as XML, RDF, RDFa, and microformats.

This trend of structured data on the Web (Data Web) is shifting the focus of Web technologies towards new paradigms of structured-data retrieval. Traditional search engines cannot serve such data as the results of a keyword-based query will not be precise or clean, because the query itself is still ambiguous although the underlying data is structured. On the other side, traditional structured querying languages cannot be used directly as data on the Data Web is heterogeneous, large, distributed, schema-free, and not intuitive for web users. To expose the massive amount of structured data on the Web to its full potential, people should be able to query and combine this data easily and effectively.

This special issue of the WWW Journal seeks original articles describing theoretical and practical methods and techniques for fostering, querying, and consuming the Data Web. Topics relevant to this special issue include, but are not limited to, the following:

- Keyword based search over structured data
- User interfaces for querying
- Novel approaches for Querying and filtering structured data on the Web
- Semantic enrichment and reasoning
- Ranking, measures, and benchmarks
- Distributed and federated query processing
- Continuous querying
- Temporal and spatial aware queries
- Preferences and Context
- Data mashups
- Presentation of results
- Crawling and indexing
- Entity Resolution
